DETAILED ACTION

Claim Rejections - 35 USC § 101

35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

With regards to claims 1-5 the methods recited in the claimed invention do not produce a real life, real world, useful, concrete, and tangible **result**.

The claimed invention as a whole must accomplish a practical application. That is, it must produce a "useful, concrete and tangible **result**." State Street, 149 F.3d at 1373, 47 USPQ2d at 1601-02. The purpose of this requirement is to limit patent protection to inventions that possess a certain level of "real world" value, as opposed to subject matter that represents nothing more than an idea or concept, or is simply a starting point for future investigation or research (Brenner v. Manson, 383 U.S. 519, 528-36, 148 USPQ 689, 693-96); In re Ziegler, 992, F.2d 1197, 1200-03, 26 USPQ2d 1600, 1603-06 (Fed. Cir. 1993)).

A process that consists solely of the manipulation of an abstract idea is not concrete or tangible. See In re Warmerdam, 33 F.3d 1354, 1360, 31 USPQ2d 1754, 1759 (Fed. Cir. 1994). See also Schrader, 22 F.3d at 295, 30 USPQ2d at 1459. Nor can one patent "a novel and useful mathematical formula," Flook, 437 U.S. at 585, 198 USPQ at 195; electromagnetism or steam power, O'Reilly v. Morse, 56 U.S. (15 How.) 62, 113-114 (1853);

Please view the following guidelines to overcome 35 U.S.C. 101 rejection made in this office action in MPEP 2106 and/or

Allowable Subject Matter

The following is a statement of reasons for the indication of allowable subject matter:

Regarding claims 8 and 9:

The primary reason for the allowance of claim 8 is the inclusion of: an arrangement configured to determine a transfer function of a target system within the drive system in accordance with the noise signals applied to the drive system, the transfer function of the target system in an open control loop determined in accordance with difference signals applied to the target system and corresponding output signals, the determination including an evaluation of a frequency-dependent attenuation and a phase shift between the difference signals and the output signals. It is this feature found in the claim, as it is claimed in the combination that has not been found, taught or suggested by the prior art of record, which makes this claim allowable over the prior art.

The primary reason for the allowance of claim 9 is the inclusion wherein the transfer function of the target system in an open control loop is determined by the determining means in accordance with difference signals applied to the target system and corresponding output signals. It is this feature found in the claim, as it is claimed in the combination that has not been found, taught or suggested by the prior art of record, which makes this claim allowable over the prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Response to Arguments

Applicant's arguments filed 08/08/2006 have been fully considered but they are not persuasive.

With regards to claim 1, 4 and 5 the result as claimed is merely a manipulation of data and does not produce a tangible **result**. The object of the claims seems to be to determining a transfer function. The result should show that the transfer function is communicated outside of the system. Since determining the transfer function is merely manipulation of data an example of a tangible result would be storing the transfer function in a computer readable medium for later retrieval.
